AM/FM Radio comprises ¼ of the time Americans spend with media each day

Among young Adults 18-34, AM/FM Radio represents nearly 1/3rd of their media day

Radio has been challenged before - many times. Each challenge was supposed to be the “knockout” punch, but none ever were. Radio has adapted and continues to fill a very real need in people’s lives -
convenient, compelling entertainment. Curation, the adding of new songs at the right time and eliminating old songs at the right time, has played a big role in its continued popularity.

Smart phone penetration and audio alternatives continue to proliferate and some believe that radio’s rung on the media ladder will decline in 2012 and beyond with the increased digital audio competition. History shows that radio weathered numerous competitive storms over the past 50 years and will do so again. Below chronicles the various challenges Radio has weathered:

**Despite technological advancements in media over the years, radio remains CONSISTENT!**

An analysis of radio listening data from Arbitron shows the medium is holding up very well, particularly over the past 3 years in spite of digital audio alternatives. From 2009 to 2011, weekly reach is over 95% for advertisers’ most important demographics (A18-49 and A25-54), and usage is over 2 hours per day.

Radio reaches over 92% of virtually every segment of the population. That has been true year after year and remains true today.
